## EK-601W

Resolution: WXGA (1280x800)
Aspect Ratio: (10 High by 16 Wide by 18.868 Diagonal) Aperture:
0.55 in . wide

Screen Dimensions

How to use the T/R column. If your screen size does not appear on this chart, use the T/R column to find the lens you need. Divide the Throw distance by the screen Width to get your "target T/R number". Then, look for a lens with a T/R range that covers it

Understanding Shift/Limits. The numbers in the Shift/Limits column express the projector positions possible as a ratio of the image heights Above:Below a line drawn perpendicular to the screen between the lens and the screen. 1:1 = center of the image. The two sides of a ratio are cumulative, so the expression $7:-1$ means that the bottom of the image starts $1 / 6$ 'th of the image height above the imaginary line

These charts are a simulation. Effective Focal Length (EFL) most accurately represents lens behavior, and drives the calculations.
Calculations are from the front glass of the lens and accurate to approximately $+/-5 \%$. Specifications are subject to change without notice.
