How to use the T/W column. If your screen size does not appear on this chart, use the T/W column to find the throw you need.
Simply multiply the screen width by the value in the T:W column.

Understanding Shift/Limits. The numbers in the Shift/Limits column express the projector positions possible as a ratio of the image heights Above:Below a line drawn perpendicular to the screen between the lens and the screen. $1: 1=$ center of the image. $10: 0=$ top of the image.

These charts are a simulation. Effective Focal Length (EFL) most accurately represents lens behavior, and drives the calculations..
Calculations are from the front glass of the lens and accurate to approximately $+/-3 . \%$. Specifications are subject to change without notice.
