## 1. Overview

- 1.1. These specifications define projector control commands for LC-XB40(0.8" XGA ).
- 1.2. The projector control commands are used to remotely control a projector through RS-232C from a computer.

## 2. Serial Interface Specifications

### 2.1. Transfer Specifications

Item	Specifications
Synchronous system	Asynchronous
Transmission Speed	9600 / 19200
Data Length	8 bit
Parity	N/A
Stop Bit	1
Flow Control	N/A

- 1) Transmission speed: initial setting value is 19200.
- 2) Transmission speed can be changed in service mode.

### 2.2. Connection

Dedicated serial cable must be used for connection to a computer and a projector.

### 3. Notes for Communication

- 1.1. The projector control command is defined as one command/one line that starts with "C" and ends with carriage return (0x0D).
- 2.2. There are two types of Commands: Functional Execution Commands and Status Read Commands.

Example of Functional Execution Command: "C05" [CR]

Example of Status Read Command: "CR0" [CR]

- 3.3. When it takes more than one second to receive one command, it does not operate.

The information of buffer is cleared when it takes more than one second to receive carriage return (0x0D) after the projector receives the first data "C".

- 4.4. For Command pipelining, wait for the interval of 100ms after receiving a response.

- 3.4.1. When a command is issued before receiving a response, the function is not executed properly.
- 3.4.2. Except for when there is no Response for more than 5 seconds.
- 5.5. It takes about 5 seconds for internal initialization after plugging in AC power. During this time, it cannot process commands. Do not issue any command.
- 6.6. The number of characters of response to Status Read Commands depends on commands.  
Please see [7. Status Read Commands].
- 7.7. Characters for commands must be Capital (A - Z).

## 6. Functional Execution Command

### 6.1. Format

6.1.1. PC issues a command in format as below.

“C” **COMMAND** [CR]

Command: two characters (See Basic Functional Execution Command Table)

6.1.2. A projector changes received data to decode and returns a result after being ready to receive next command.

[ACK][CR]: (0x06, 0x0D) When received Functional Execution Commands.

6.1.3. “?”[CR]: When the received data cannot be decoded.

### 6.2. Command Pipelining

When some functions need the command pipelining, the performance is the same as that of the remote control;

6.2.1. System: issues any command every 100 ms.

6.2.2. When receiving the appropriate command, the function is executed for 120 ms from the moment.

6.2.3. When receiving the same command continuously within 120 ms, the function is executed for another 120 ms from the moment.

6.2.4. When there is no incoming command after 120 ms, the execution of pipelining is stopped.

6.2.5. When the projector receives other incoming commands within 120ms, the execution of pipelining is stopped.

### 6.3. Transfer Example

Switch the projector to video mode with Basic Command.

## 7. Status Read Command

### 7.1. Format

7.1.1. PC issues commands in format as below;

**"CR" Command [CR]**

Command : 1 character ( See Basic Status Read Command Table )

7.1.2. When a projector receives the appropriate command, it returns a character line as the required data.

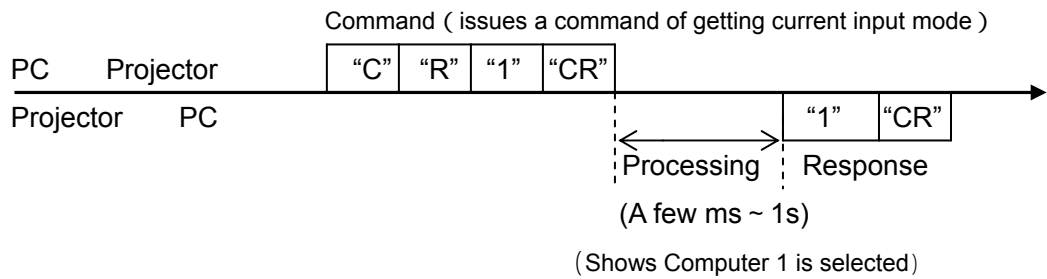

**Required Data [CR]**

Required Data : A character line ( See Basic Status Read Command Table )

7.1.3. When the received data cannot be decoded, the projector returns "?" [CR].

### 7.2. Transfer Example

Get input mode for projector with basic commands

### 7.3. Status Read Command

Command	"CR0" [CR]	
Detail	Get the projector's operating status	
Response	Acceptable	"%1" [CR]
	%1	"00" = Power ON "80" = Standby "40" = Countdown in process "20" = Cooling Down in process "10" = Power Failure "28" = Cooling Down in process due to Temperature Anomaly "88" = Coming back after Temperature Anomaly "24" = Power Save/Cooling Down in process "04" = Power Save
	Unacceptable	"?" [CR]

#### [Details of Response]

##### 7.3.1. "00" [CR]

Status : Power ON

Normal image is on the screen.

##### 7.3.2. "80" [CR]

Status: Standby

When the status is Standby, Status Read Commands are always acceptable, but Functional Execution Commands are not acceptable except POWER ON Command.

##### 7.3.3. "40" [CR]

Status: Countdown in process

When "Display" in Setting Menu is ON and POWER ON is executed, it starts Countdown.

When "Display" in Setting Menu is OFF, processing Countdown is not executed and the status quickly moves to Power ON.

##### 7.3.4. "20" [CR]

Status: Cooling Down in process

When the status is Power ON, and POWER OFF Command ("C01"[CR]) is executed, it moves to Cooling Down status.

This status automatically moves to Standby after lamp turns off and the fan spin finishes after about 90 seconds. The fan spin time depends on a model.

This function is used to cool down the lamps and other optical parts and is quite important for projector's reliability.

During this time, Functional Execution Commands are invalid.

**7.3.5. “10” [CR]**

Status: Power Failure

When the power supply voltage inside the projector reaches abnormal status, the projector is automatically turned off. The projector returns “10”[CR], which shows it moves to Power OFF status due to power failure. Fan also stops unlike Cooling Down status.

**7.3.6. “28” [CR]**

Status: Cooling Down in process due to Temperature Anomaly

When the inside temperature is out of the operating temperature, it automatically starts Cooling Down. Response for this status is “28”[CR].

Even if the temperature decreases during this process, Cooling Down is executed.

**7.3.7. “88”[CR]**

Status: Coming back after temperature anomaly
